

FINAL REPORT
2018 Deer Management Program
Town and Country, Missouri
by
White Buffalo, Inc.
11 February 2018

INTRODUCTION

The City of Town and Country contains a matrix of suburban and commercial development, parks, and other open-spaces. The absence of any deer management combined with fertile soils allowed the local deer population to increase to a level incompatible with some land use and human activities prior to our involvement. Although deer physical condition is not an issue, there is ongoing concern regarding numerous deer/vehicle collisions and damage to garden and landscape plantings. This is the 9th year in which a deer population management program was implemented.

METHODS

Pre-baiting was conducted from 14 December 2017 – 1 January 2018. Sharpshooting efforts were conducted from 2 January – 7 February 2018. Thirty-five days of fieldwork were required to achieve the harvest of 361 deer.

We followed the operations protocol outlined in the contract and changes agreed to verbally prior to the onset of site preparations. Twenty nine sites were available throughout the area of operation.

RESULTS

The entire data set generated from harvested deer is represented in the spreadsheet entitled "City of Town and Country - Deer Harvest: 2 January – 7 February 2018 (Appendix A). The overall harvest demographics are summarized in Table 1. Harvest by day is summarized in Table 2. Harvest breakdown based on Ward is summarized in Table 3. We expended 1,192.5 person-hours for sharpshooting activities (361 deer harvested) resulting in 3.3 person-hours per deer harvested. This was a 58% increase over the previous year's effort (2.09 person-hours per deer) when the deer population was above 45 deer/mi².

Table 1. Sex and age class of deer harvested in Town and Country, Missouri from 2 January -7 February 2018.

AGE	# MALE (%)	# FEMALE (%)	# COMBINED
Yearling/Adult	98 (27%)	170 (47%)	268 (74%)
Fawns	52 (15%)	41 (11%)	93 (26%)
Total	150 (42%)	211 (58%)	361(100%)

Table 2. Number of deer harvested by day during the 35 days of field operations.

Pregnancy rates

It was too early in pregnancy to identify and count fetuses.

Population estimates

See attached population estimation report.

DISCUSSION

Twenty nine sites were utilized as part of the 2018 Town and Country, MO deer management program. Twelve new sites were added to the property list to provide more comprehensive coverage of the municipality.

Ward 2 continued to produce the highest removal numbers accounting for 52% of the harvest, an increase of 10% over 2017. Two sites in Ward 2 contributed 49 deer to the total harvest. The harvest result in Ward 1 was identical to 2017 at 12%. The harvest in Ward 3 and 4 decreased to 18% and 20%, from 20% and 24% respectively.

Harvest results from specific sites ranged from a high of 29 deer to a low of 1. Seven of the sites had ≥ 20 deer culled and contributed to 50% of the total. Twenty-two percent of the deer harvested were on three properties adjoining Queeny Park. Two sites along the western edge of Queeny Park in Ward 3, contributed 54 deer to the total, resulting in 15% of the harvest. One site along the eastern edge of Queeny Park in Ward 2 contributed an additional 27 deer, 7% of the harvest total.

Queeny Park continues to pose a major challenge to the reduction of deer numbers within areas of Town and Country that are located proximate to the Park. Lack of management by the County park system has created a safe haven, in which the deer are able to use the park as a refuge during the day and then transition into the adjoining residential areas at night.

The program benefited from the inclusion of several new access points that were created in order to better address deer along both Topping and Thornhill Roads. During the distance sampling survey only 7 deer were sighted along Topping Road and its intersecting streets which resulted in 4.5% of the overall observations. This was a significant reduction from the ~19% of the total observations made during the 2017 survey. In addition, access in the Manor Hill/Woodmark area significantly benefited the program. No deer were observed in this area during the survey, a substantial improvement over the 2017 survey when multiple deer were observed. We tagged and labeled 223 of the deer harvested for Chronic Wasting Disease (CWD) testing by Missouri Department of Conservation (MDC). This was part of a larger sampling effort by MDC to screen for the disease in areas proximate to the detection made previously in Franklin County.

There was a 58% increase in effort per deer harvested from 2017, when the deer population was above 45 deer/mi². As expected, the effort to reduce the deer population below the 30 deer/mi² level increased the amount of effort required per deer culled.

Looking forward, the program would benefit by obtaining additional access points in the following areas; the eastern boundary of Queeny Park, Town and Country Estates/Delvin Drive, and in the vicinity of Clayton Road and Williamsburg Estates. This recommendation is based on the high number of deer observed in these areas during the Distance Sampling survey, in combination with a current lack of access points to these areas for deer management purposes.

We would like to thank the following individuals and organizations for assistance provided prior to and during the culling period; Chief of Police Gary Hoelzer, Tom Thousand, Gene Russo, Dan Coppin, Tim Randick, Fred Meyland-Smith, Lynn Wright, Erin Shank (Missouri Department of Conservation), all the cooperating homeowners and John's Butcher Shop (venison processing for charitable donation).
